

Satellite radio was licensed as a national service, PERIOD! So now they want to compete with a system based on local broadcasts by local broadcasters. Why is a national service wanting the ability to satellite specific programming to specific markets? Lets face it, they were planning this all along!!! They lied!!!!Please support HR 4026 !!!!!

The satellite people can do what they do best, national programming for a national audience, and local broadcasters serving their own individual communities with local news, weather and entertainment..

Why damage a system that has been serving local communities for over 75 years. If satellite people can do local programming, why can't local stations get a satellite channel.

Government has already chased local boradcasters off of the internet.
